

*** Design Process Flowchart ***

*** Design Process Flowchart ***

Tips:

- ☐ Allow for future growth. For example, you will accumulate many more clamps so allow plenty of space for your clamp storage area. Provide electrical and dust collection infrastructure for future desired tools.
- ☐ Create an “Order of Operations” so you do things in the right order. For example, before you drywall your shop, do all your wiring per the electrical plans. Again, allow for future growth.
- ☐ Highlight (maybe in Orange) those things you can do that will have the biggest impact on your day to day woodworking. Do those first.
